   /reboot
   /factoryReset
```

Introduction

The REST API on the Nuki Bridge offers simple endpoints to list all available Nuki Smart Locks, retrieve their current lock state and perform lock operations.

When using the Nuki Software Bridge, all configuration is done inside the Nuki Bridge App instead of the Nuki App.

Calling URL

This is the address used to call the available services of the internal webserver.

The IP address is shown in the bridge settings within the Nuki App.

The server is listening for incoming requests either on default port 8080 or the configured one if it has been modified within the Nuki App.

Example

The following base url will be used in upcoming examples: http://192.168.1.50:8080/

Lock states

Possible lock states (used in **Endpoints** below):

ID	Name
0	uncalibrated
1	locked
2	unlocking
3	unlocked
4	locking
5	unlatched
6	unlocked (lock 'n' go)
7	unlatching
254	motor blocked
255	undefined

Lock actions

Possible lock actions (used in **Endpoints** below):

ID	Name
1	unlock
2	lock
3	unlatch
4	lock 'n' go
5	lock 'n' go with unlatch

Endpoints

/list

URL	http://192.168.1.50:8080/list				
Usage	Returns a list of all paired Smart Locks				
URL-Parameters	token The api token configured via the Nuki app when enabling the API				
Response	JSON array. One item of the following per Smart Lock				
	nukiId		ID of the Smart Lo	ock	
	name		Name of the Smar	t Lock	
	lastKnownState		JSON list containing the last known lock state of the Smart Lock		
			state	ID of the lock state (see <u>Lock states</u>)	
			stateName	Name of the lock state (see <u>Lock states</u>)	
			batteryCritical	Flag indicating if the batteries of the Smart Lock are at critical level	
	timestamp Timestamp of the retrieval this lock state			Timestamp of the retrieval of this lock state	
Errors	HTTP 401 Returned if the given token is invalid				
Example-Call	http://192.1	http://192.168.1.50:8080/list?token=123456			

```
Example-Response
                         [{
                           "nukiId": 1,
                           "name": "Home",
                           "lastKnownState": {
                           "state": 1,
                           "stateName": "locked",
                           "batteryCritical": false,
                           "timestamp": "2016-10-03T06:49:00+00:00"
                          }
                         },{
                          "nukiId": 2,
                          "name": "Grandma",
                          "lastKnownState": {
                           "state": 3,
                           "stateName": "unlocked",
                           "batteryCritical": false,
                           "timestamp": "2016-10-03T06:49:00+00:00"
                          }
                         }]
```

/lockState

IIDI	1. thus //100 160 1 50,0000 /last Chata				
URL	nttp://192.10	http://192.168.1.50:8080/lockState			
Usage	Retrieves and	d retur	ns the current lock state of a given Smart Lock		
URL-Parameters	nukiId The ID of the Smart Lock from which the lock state should be retrieved				
	token		The api token configured via the Nuki app when enabling the API		
Response	JSON list cor	JSON list containing the retrieved lock state			
	state ID of the lock state (see <u>Lock states</u>)				
	stateName Name of the lock state (see <u>Lock states</u>)				
	batteryCritical Flag indicating if the batteries of the Smart Lock are at critical level				
	success	Flag indicating if the lock state retrieval has been successful			
Errors	HTTP 401	Returned if the given token is invalid			
	HTTP 404	Returned if the given Smart Lock is unknown			
	HTTP 503	Returned if the given Smart Lock is offline			
Example-Call	http://192.168.1.50:8080/lockState?nukiId=1&token=123456				

Example-Response	{
	"state": 1,
	"stateName": "locked",
	"batteryCritical": false,
	"success": true
	}
	*

/lockAction

URL	http://192.16	http://192.168.1.50:8080/lockAction				
Usage	Performs a lo	Performs a lock operation on the given Smart Lock				
URL-Parameters	nukiId	The ID of the Smart Lock which should execute the lock action				
	action	The desired lock action (see <u>Lock actions</u>)				
	noWait	Flag (0 or 1) indicating whether or not to wait for the lock action to complete and return its result optional; defaults to 0				
	token	1	The api token configured via the Nuki app when enabling the API			
Response	JSON list containing the result of the lock action					
	batteryCritical Flag indicating if the batteries of the Smart Lock are at critical level					
	success	Flag indicating if the lock action has been executed successful				
Errors	HTTP 400	Retu	urned if the given action is invalid			
	HTTP 401	Retu	urned if the given token is invalid			
	HTTP 404	Retu	ırned if the given Smart Lock is unknown			
	HTTP 503	Retu	urned if the given Smart Lock is offline			
Example-Call	http://192.168.1.50:8080/lockAction? nukiId=1&action=1&token=123456					
Example-Response		success": true, batteryCritical": false				

/unpair

not available on software bridge

URL	http://192.168.1.50:8080/unpair				
Usage	Removes the	Removes the pairing with a given Smart Lock			
URL-Parameters	nukiId The ID of the Smart Lock which should be unpaired				
	token	token The api token configured via the Nuki app when enabling the API			
Response	JSON list containing the result of the operation				
	success Flag indicating if the lock action has been executed successful				
Errors	HTTP 401	Retu	urned if the given token is invalid		
	HTTP 404	Returned if the given Smart Lock is unknown			
Example-Call	http://192.168.1.50:8080/unpair?nukiId=1&token=123456				
Example-Response	{ "success": true }				

/info

URL	http://192.168.1.50:8080/info					
Usage	Returns all Smart Locks in range and some device information of the bridge itself					
URL-Parameters	token The api token configured via the Nuki app when enabling the API					
Response	JSON list with the result					
	bridgeType		1 => Hardware bridge2 => Software bridge			
	ids		JSON list containing the ids of the bridge			
			hardwareId	Hardware ID hardware bridge only		
	serverId Server ID					
	versions JSON list containing the versions of bridg					
			firmwareVersion	Version of the bridges firmware hardware bridge only		

			wifiFirmwareVersion	Version of the WiFi modules firmware hardware bridge only	
			appVersion	Version of the bridge app software bridge only	
	uptime		Uptime of the bridge in s	econds	
	currentTim	e	Current timestamp		
	serverConn	ected	Flag indicating whether or not the bridge is connected to the Nuki server		
	scanResults	3	JSON Array. One item of Smart Lock	the following per	
			nukiId	Smart Lock ID	
			name	BLE-Name of the Smart Lock	
			rssi	RSSI value	
			paired	Flag indicating whether or not a pairing with this Smart Lock has already been established	
Errors	HTTP 401 Returne		ed if the given token is invalid		
Example-Call	http://192.168.1.50:8080/info?token=123456				
Example-Response	<pre>{ "bridgeType": 1, "ids": {"hardwareId": 12345678, "serverId": 12345678}, "versions": { "firmwareVersion": "0.1.0", "wifiFirmwareVersion": "0.2.0" }, "uptime": 120, "currentTime": "2016-04-01T12:10:11Z", "serverConnected": true, "scanResults": [{ "nukiId": 10, "name": "Nuki_00000010", "rssi": -87, "paired": true },{ "nukiId": 11, "name": "Nuki_00000011", "same": "Nuki_000000011", "nukiId": 11, "nukiId": 11, "name": "Nuki_000000011", "name": "Nuki_000000011", "name": "Nuki_000000011",</pre>				

```
"rssi": -93,
    "paired": false
    }
]
```

/callback

The following endpoints provides methods to register up to 3 http (no https) url callbacks, which will be triggered once the lock state of one of the known Smart Locks changes.

The new lock state will be sent to the callback url by executing a POST request and posting a JSON list in the following format:

{"nukiId": 11, "state": 1, "stateName": "locked", "batteryCritical": false}

/callback/add

URL	http://192.168.1.50:8080/callback/add				
Usage	Registers a ne	Registers a new callback url			
URL-Parameters	url The callback url to be added (no https, url encoded, max. 254 chars)				
	token	The api token configured via the Nuki app when enabling the API			
Response	JSON list containing the result				
	success		Flag indicating if the url has been added successfully		
	message	essage Contains the reason for the failure if success is false			
Errors	HTTP 400	Retu	urned if the given url is invalid or too long		
	HTTP 401	Returned if the given token is invalid			
Example-Call	-	http://192.168.1.50:8080/callback/add?url=http%3A%2F %2F192.168.0.20%3A8000%2Fnuki&token=123456			
Example-Response	{"success": true}				

/callback/list

URL	http://192.168.1.50:8080/callback/list
Usage	Returns all registered url callbacks

URL-Parameters	token	The api token configured via the Nuki app when enabling the API				
Response	JSON list wit	ON list with the result				
	callbacks	JSON array. One item of the following per callback				
		id		ID of the callback		
		url URL of the callback				
Errors	HTTP 401	Returned if the given token is invalid				
Example-Call	http://192.168.1.50:8080/callback/list?token=123456					
Example-Response	{ "callbacks": [{ "id": 0, "url": "http://192.168.0.20:8000/nuki" },{ "id": 1, "url": "http://192.168.0.21/test" }] }					

/callback/remove

URL	http://192.168.1.50:8080/callback/remove		
Usage	Removes a previously added callback		
URL-Parameters	id The id of the callback to be removed		
	token	The api token configured via the Nuki app when enabling the API	
Response	JSON list containing the result		
	success		Flag indicating if the url has been added successfully
	message		Contains the reason for the failure if success is false
Errors	HTTP 400	Returned if the given url is invalid or too long	
	HTTP 401	Returned if the given token is invalid	
Example-Call	http://192.168.1.50:8080/callback/remove?id=0&token=123456		
Example-Response	{"success": true}		

Maintenance endpoints

The following endpoints are available for maintenance purposes of the hardware bridge. Therefore they are not available on the software bridge.

/log

URL	http://192.168.1.50:8080/clearlog		
Usage	Retrieves the log of the Bridge		
URL-Parameters	offset Offset position where to start retrieving log entries optional; defaults to 0		
	count How many log entries to retrieve optional; defaults to 100		, ,
	token	The the	api token configured via the Nuki app when enabling API
Response	JSON array. One item of the following per log entry		
	timestamp		Timestamp of the log entry
	type		Type of the log entry
	some more optional parameters		
Errors	HTTP 401 Returned if the given token is invalid		
Example-Call	http://192.168.1.50:8080/log?token=123456		
Example-Response	[

/clearlog

URL	http://192.168.1.50:8080/clearlog	
Usage	Clears the log of the Bridge	
URL-Parameters	token	The api token configured via the Nuki app when enabling the API
Response	No response	

Errors	HTTP 401	Returned if the given token is invalid
Example-Call	http://192.168.1.50:8080/clearlog?token=123456	
Example-Response	None	

/fwupdate

URL	http://192.168.1.50:8080/fwupdate		
Usage	Immediately checks for a new firmware update and installs it		
URL-Parameters	token The api token configured via the Nuki app when enabling the API		
Response	No response		
Errors	HTTP 401	Returned if the given token is invalid	
Example-Call	http://192.168.1.50:8080/fwupdate?token=123456		
Example-Response	None		

/reboot

URL	http://192.168.1.50:8080/reboot	
Usage	Reboots the bridge	
URL-Parameters	token The api token configured via the Nuki app when enabling the API	
Response	No response	
Errors	HTTP 401	Returned if the given token is invalid
Example-Call	http://192.168.1.50:8080/reboot?token=123456	
Example-Response	None	

/factoryReset

URL	http://192.168.1.50:8080/factoryReset	
Usage	Performs a factory reset	
URL-Parameters	token The api token configured via the Nuki app when enabling the API	

Response	No response	
Errors	HTTP 401	Returned if the given token is invalid
Example-Call	http://192.168.1.50:8080/factoryReset?token=123456	
Example-Response	None
